

Above: Rows of industrial quality shelving house automotive parts and related equipment in a large metropolitan fleet garage.

Lyon system designs include shelving; multi-level storage; high-rise storage; mezzanines; modular drawer storage; selective pallet rack; drive-in/drive-thru, carton flow, gravity flow, bulk storage and cantilever racks; flammable storage equipment and other related storage products.

As a result, Lyon provides totally integrated solutions without bias or preference for any particular product or design. While another company's recommendations may be restricted to certain designs or products, Lyon has few such limitations in view of the breadth and scope of its product lines and years of experience.

With more than 500 employees, 100 factory-trained District Managers and a nationwide network of authorized distributors, Lyon has all the resources needed to provide integrated "turnkey" solutions to satisfy even the most complex storage and material handling requirements.

Lyon services typically include analysis, consultation, design, cost-justification, engineering, warehouse management and implementation. In addition to delivering the products, production capabilities, project management and engineering know-how it takes to see projects through to completion, Lyon also maintains the financial strength that engenders results as planned and establishes long term relationships.

Right: High-rise, high density storage system with man-aboard lift-truck selection puts thousands of parts within arms-reach — minutes away from the service area.

Engineered Storage Systems Services Include:

- Factory sales representatives in all major metropolitan areas to assist you in your application
- Computer Aided Design
- Factory Staffed Engineers
- Professional Engineering Certification
- Building Codes Compliance (national and local)
- Seismic Zone Certification
- State-of-the-art manufacturing and finishing systems
- Lyon Lifetime Product Warranty
